

1.0 - Introduction

moveon is a management software package which was developed for the International Offices of higher education institutions. It assists the staff of these offices in all the tasks of managing cooperation programmes, mobility of students and teaching staff, and funding. It facilitates correspondence thanks to its mail merge functions and its interface with email programmes. With its user-friendly design and its numerous functions covering all the activities of the International Offices, moveon offers outstanding tools for managing the services of these offices.

In the development of moveon, priority was given to user-friendliness and ease of use. However, because of the scope of the software, it is advisable to consult the manual or the online help on a regular basis to ensure that you are getting the maximum benefit from the programme functions. We hope that these documents will be helpful and support you in your day-to-day work.

Having successfully installed the programme in more than 300 institutions, the QS unisolution team is convinced that moveon perfectly meets the requirements of institutions with regard to the management of international relations. However, our team is always ready to listen to your thoughts on additional functions to further improve the software, and we will be delighted to receive your comments, suggestions and even compliments via the following address: info@qs-unisolution.com.

We hope you enjoy working with moveon.

On behalf of the entire QS unisolution team.

Manuel Dietz - Stéphane Velay
Developers of moveon and associate directors of QS unisolution GmbH
